

Crystal Green Synchro™ 50 MAX 9N-42.5P-0-7Mg

THE NEXT GENERATION OF PHOSPHATE FERTILIZER.

Crystal Green Synchro™ 50 MAX is a fully homogeneous sustainable struvite-based granular fertilizer with an analysis of 9-42.5-0-7Mg. There's no need to blend Crystal Green and MAP. Crystal Green Synchro 50 MAX is like blending a 50/50 ratio of **Crystal Green and MAP**, but instead of a blended fertilizer, it's a **fully homogeneous granular fertilizer**. Each granule will contain the same analysis for **uniform** blending and field application. This unique combination provides **upfront phosphorous availability** as well as **season-long phosphorous** to **maximize return on investment**. That's not just good economics, it's sustainable and innovative agronomics.

What is Crystal Green Synchro™ 50 MAX

The best of both worlds.

Crystal Green Synchro 50 MAX Is the latest **struvite-based** fertilizer to provide nutrients in a powerful, **Root-Activated™ granule** to deliver access to fertilizer upfront and throughout the season for increased efficiency and profitability. Crystal Green Synchro 50 MAX **performs differently than any other phosphate fertilizer**. Crystal Green Synchro 50 MAX's slow-release portion is activated naturally by organic acids from growing roots. Responding to plant demand means **improved nutrient efficiency, reduced nutrient loss, and the potential for greater yield, uniformity of growth, and quality**.

Size	SGN 300
Uniformity Index	50%
Bulk Density	55 lbs/cu ft

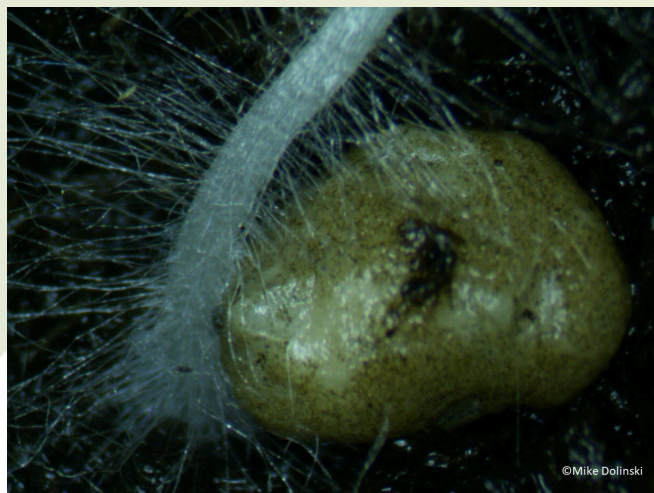

ROOT-ACTIVATED™
TECHNOLOGY

REDUCED
NUTRIENT LOSS, TIE
UP, AND RUNOFF

IMPROVED
EFFICIENCY

©Mike Dolinski

With 40% total phosphate, from both Crystal Green's Root-Activated™ technology and MAP, roots have access to critical nutrients quickly and efficiently throughout the growing season.

How it Works

Unique Root-Activated™ Technology

Crystal Green Synchro 50 MAX is the first and only phosphate fertilizer to combine the rapid availability of MAP with continuous release utilizing Root-Activated™ nutrient technology of Crystal Green. Nutrients are available from the start of the season and continuously released in response to weak organic acids, such as those produced by growing roots, and soil microbes. Crystal Green Synchro 50 MAX's unique dual mode of action delivers plant-available phosphorous immediately for early plant development and continues to meet demand when the plant needs it most, putting your crops in control of their phosphate needs.
